Cyclops:

All video are provided as a local .mov and as an embedded Google video - I'd prefer that you use the Google versions, as they consumes less of my bandwidth.

3D model of the shed from a house I previously lived in. Created using the Hierarchical Belief Propagation algorithm.

Anaglyph version of above.

Ground Truth of my head.

My head, calculated by Cyclops.

Earlier version of above. Less refined.

Cleaned up version of Cyclops tutorial 2 output.

Tutorial 2 output, earlier version, not cleaned up.

Video of a 3D model created with Cyclops using the plane fitting post-processing technique.

Anaglyph version of the above. (Your probably best off using the Quicktime file for this, the compression used by Google Video is real bad for the 3D effect.
